PART 01

INTRODUCTION

ABOUT THE REPORT

The “**2025-2026 Vietnam IT Salary & Recruitment Market Report**” examines Vietnam’s IT market at a critical transition point, where AI adoption is reshaping company strategies, roles, expectations, and hiring decisions, while IT market demand begins to recover in a more measured and selective form.

Drawing on insights from 1,839 IT professionals, freelancers, students, and employers across Vietnam, this report combines survey data with verified public information and multi-dimensional analysis to capture not only what is changing, but where expectations and reality are diverging.

While AI continues to elevate expectations around productivity, speed, and skill expansion, the data indicates that hiring demand and job readiness are adjusting at a more measured pace. This shift toward more mature expectations is visible across experience levels and roles, influencing career confidence, reinforcing cautious hiring, and contributing to more deliberate, sustainable decision cycles on both sides of the market.

Commenting on the findings, **CEO of ITviec, Mr. Naoto Iijima** notes:

“Vietnam’s IT hiring market is showing clear signs of recovery, but in a more selective and mature form. As AI becomes embedded into daily work, demand is shifting from pure technical skills toward a combination of problem-solving ability, communication, and effective collaboration.”

“In the AI era, long-term career resilience will depend not only on what professionals know today, but on their ability to continuously learn, reskill, and adapt. This report aims to help both employers and IT professionals better understand these shifts and make more sustainable, informed decisions in Vietnam’s evolving IT market.”

RESEARCH METHODOLOGY

The research was conducted online and included responses from 1,839 qualified participants, comprising IT professionals, IT freelancers, IT HR leaders, and CxOs. Most respondents were based in key cities such as Hanoi, Da Nang, and Ho Chi Minh City. The selection criteria were defined as follows:

Type of respondent		Definition	Count
1. IT Professionals			1,493
1.1	Full-time IT Professionals	Individuals who are currently working full-time in IT roles.	1,314
1.2	Dual-role IT Professionals	Individuals who are managing dual roles as full-time IT employees and freelancers/on-demand IT jobs.	131
2. Unemployed IT Professionals		Individuals who have left full-time IT positions within the past six months and are actively seeking new employment.	49
3. IT Freelancers			202
3.1	Independent IT Freelancers	Individuals who are only working in freelancing/on-demand IT jobs	71
3.2	Dual-role IT Professionals	Individuals who are managing dual roles as full-time IT employees and freelancers/on-demand IT jobs.	131
4. IT Students		Individuals currently enrolled in formal IT university programs or IT-related fields, excluding those in non-formal systems such as training center courses.	159
5. HR Leaders and CxOs		Individuals involved in human resources, IT talent recruitment and IT hiring decision-making processes within their organizations.	115

DISCLAIMER

The salary and information in this report were determined by analyzing the responses from 1,839 qualified respondents across profiles such as IT professionals, freelancers, IT students, HR leaders and CxOs. The inclusion of this data by ITviec is intended only to provide general insights into findings for the stated positions/groups and does not indicate a confirmation of its validity.

Whilst every effort has been made to ensure the accuracy of the statistics in the report, ITviec cannot be held responsible for any errors or omissions, or for the results obtained from the use of the report information. If you wish to use copyrighted materials from this report for purposes of your own that go beyond fair use, you must obtain written permission from ITviec.

Median salary

Median salary is the middle value in the set of data that was sorted. For instance, the sorted salary value data set for Back-end Developers with 1 to 3 years of experience are as follows:

26, 27, 28, 28, 28, 28, 30, 31, 31, 32, 34

The set contains 11 data numbers. The middle value of the data set is 28.

⇒ Median salary is 28

Or 28, 28, 28, 28, 30, 31, 31, 32, 34, 60, 66, 82, 85, 85

The set contains 14 data numbers. The middle value of the data set is 31 and 32.

⇒ Median salary is $(31 + 32) / 2 = 31.5$

The median number of years of experience is calculated in the same way as the median salary.

Average salary

Average salary is the result of the formula below:

$(\text{sum of salaries in specified group}) / (\text{number of respondents}) = \text{average salary}$

For instance, average salary of IT professionals in Ho Chi Minh City is:

$(13 + 18 + 34 + 32 + 54 + 76 + 90 + 34 + 45 + 20) / 10 = 41.6$

Percentage

Percentages may not always equal 100% due to variations in the types of questions and answers, and minor rounding for long attribute lists. Some questions and answers are altered based on the respondent's previous responses. In some cases, the distribution of answers for certain questions exceeded 100% due to the checklist answer type. Respondents were allowed to select more than one answer, up to a maximum of 10.

Order of IT professional levels in the report

Please note that the appearance of the "Expert/Consultant" level in 6th place, after the "C-level" range, does not indicate a hierarchical ranking of management levels. This ordering is for illustrative purposes only and does not reflect the actual organizational hierarchy.

PART 02

KEY TAKEAWAYS

Vietnam is emerging as one of the most promising markets for high speed and effective AI adoption, creating a strong foundation for sustained IT hiring demand, based on both IT companies and IT talent perspectives.

- AI adoption in Vietnam is already widespread, with 73% of companies adopting AI and 65.1% planning to increase AI budgets, while 62% expect to expand AI team size in the next 12 months. (page 16, 29)
- At the same time, AI usage among IT professionals is nearly universal, with 96.8% using AI daily and 94.2% reporting productivity improvement, showing that adoption is driven not only by top-down investment but also by strong bottom-up readiness. (page 16)
- More importantly, AI adoption in Vietnam is delivering real operational impact. 74.4% of companies report quality and productivity improvement from AI, and AI is most actively used in core workflows such as coding, debugging, research, and automation. Generative AI, AI agents, and hyper automation are advancing quickly from exploration to pilot and limited production, indicating high learning speed and practical effectiveness, even as enterprise-wide scaling remains selective due to trust and governance constraints. (page 15)
- This combination of broad adoption, rapid skill absorption, and measurable productivity gains helps explain why nearly 2/3 of companies (65.1%) continue to increase budget for AI in 2026. Moreover, regarding the prioritized strategies for 2026, 47.5% of the companies plan to integrate AI in core business processes, 28.8% for operational efficiency, and new product development (27.1%). Page (16, 20)

As AI becomes embedded into daily engineering work, demand is shifting toward experienced IT talent who can build, integrate, and scale AI enabled systems. Together, these signals position Vietnam as a high potential AI market where fast adoption translates directly into resilient, forward looking IT hiring demand rather than short term experimentation.

66.1% of surveyed companies increased IT headcount in 2025, while 69.6% plan to grow more in 2026 as IT team growth becomes more selective and highly impacted by AI.

- In 2025, 66.1% of companies increased IT headcount driven by IT team and project expansion, showing a clear recovery compared to previous years. At the same time, 20.9% of companies kept team size stable, while only 11.3% reduced headcount due to company layoffs, no replacement hiring, or voluntary turnover. This indicates that downsizing remained limited and largely driven by healthy, structural reasons rather than market distress. (page 23)
- Looking ahead to 2026, confidence continues to strengthen, with 69.6% of companies planning to grow IT teams, up by 8.9% and 21.0% compared to 1H 2025 and 2H 2025 respectively. Among companies planning no growth or reduction, 34.3% state that AI-driven productivity enables them to increase output without adding new IT headcount, rising by 18.9% from 1H 2025 and 9.6% from 2H 2025. Meanwhile, fewer new projects is almost no longer a concern, as this reason drops sharply from 23.1% in 1H 2025 and 16.4% in 2H 2025 to just 2.9% in the 2026 forecast. (page 27, 28)

Overall, IT hiring demand is entering 2026 with a more positive outlook where no growth or reduction plans are less associated with project uncertainty or cost optimization, and more aligned with companies prioritizing internal productivity and team capability, including the use of AI.

The average IT salary shows a slight correction (-1.1%) compared to 2024. Product Owners/Managers stand out with a median salary of 50.1 million VND, rising to 75 million VND for professionals with more than 8 years of experience.

- Overall salary benchmarks remain largely stable compared to 2024 (43.2 million VND vs. 43.7 million VND), showing only a marginal average decline of 1.1%. Among major IT cities, Ha Noi records the most noticeable adjustment, with average salaries decreasing by 1.9% year-on-year. (page 51)
- Technical management roles continues to lead Vietnam's IT salary landscape. CTO/CIO/VPoE positions earn a median of 101.25 million VND per month. Senior technical leadership also remains competitive, with Project Leaders/Project Managers at 50.1 million VND, Tech Leads at 51.8 million VND, and IT Managers at 50.25 million VND. (page 54)
- Product Owners/Managers stand out with a median salary of 50.1 million VND, rising to 75 million VND for professionals with more than 8 years of experience. Data roles also remain strong, with Data Analysts/Data Scientists at 40.65 million VND and Data Engineers reaching 56.9 million VND at the 3–4 year level. (page 54)
- Core engineering roles show clear salary progression: Back-end Developers grow from 12.4 million VND at entry year of experience to 54.9 million VND at high seniority, while Embedded Engineers progress from 21.4 million VND to 60.65 million VND respectively. (page 54)

IT hiring criteria are shifting. Problem solving in real-world technical situations is now the top evaluation factor for 44.6% of companies, followed closely by adaptability and willingness to learn new technologies (43.4%). (page 26)

- Following problem solving in real-world technical situations and adaptability and willingness to learn, companies also value ownership and accountability (39.8%) and hands-on technical proficiency (37.3%). Together, these factors confirm that technical credentials are no longer sufficient on their own. Instead, employers are prioritizing fewer, more well-rounded candidates who can apply skills in real contexts, adapt to evolving technologies, and deliver tangible impact in day-to-day work. (page 26)
- This shift helps explain why IT hiring challenges in 2025 were driven mainly by lack of talent readiness and salary expectation mismatch, rather than by lack of talent availability. Over half of employers (55.4%) report that candidate quality is lower than expected, while 48.2% experience gaps between candidate salary expectations and hiring budgets. (page 25)

These insights point to more selective IT hiring standards, where companies appear to place greater emphasis on productivity, adaptability, and measurable impact per hire, rather than broad-based headcount expansion.

In 2026, Vietnam's IT hiring demand reflects a dual shift: deeper requirements for experienced engineering and Cloud/DevOps-native capabilities, alongside rising expectations for collaboration-ready and problem-solving skills.

- On the technical dimension, companies place the highest priority on DevOps and CI/CD skills (53.1%), followed by Cloud and multi-cloud expertise at 48.4%, with growing demand for data engineering and system design. JavaScript (67.2%), Java (57.8%), and Python (43.8%) remain the most in demand programming languages, supported by modern frameworks such as React.js (40.6%) and Node.js (34.4%). (page 30, 31)
- Beside technical depth, hiring expectations increasingly emphasize collaboration and applied problem-solving. Employers now place strong emphasis on collaboration/teamwork skill (52.3%), communication (49.2%), English proficiency (46.2%), and problem-solving ability (41.5%), reinforcing that effective collaboration and adaptability are becoming essential to modern engineering roles, particularly as AI adoption accelerates. (page 30, 31)
- Hiring demand is concentrated in Ho Chi Minh City, which accounts for 67.7% of planned recruitment, while 72.3% of companies plan to hire mid-level and senior roles. Core engineering roles continue to dominate demand, led by Full-stack Developers at 50.8% and Back-end Developers at 47.7%, reflecting a strong focus on core and scalable product development. (page 24)

Overtime (OT) affects a notable portion of the surveyed IT workforce, with 40.9% of IT professionals reporting consideration of job change due to dissatisfaction with their current company's OT workload and OT policy.

- OT is reported by a fair share of IT professionals, with 47% working OT frequently or occasionally. Notably, 16.4% experience intensive OT of more than 8 hours per week, while 35.7% report moderate OT of 5–8 hours. (page 45)
- IT professionals working in Vietnam-origin companies record the highest OT frequency at 1.1 times per week, alongside an around-average level of paid OT compensation (42.8%). European companies show the lowest share of paid OT compensation among company origins (32.1%). In contrast, Japanese companies stand out for clear OT policy application and the highest proportion of paid compensation (57.9%), combined with moderate OT frequency and the lowest OT intensity at 4.2 hours per week (page 46)
- Although 48.0% describe OT as voluntary and 63.7% indicate they understand their company's OT policy, satisfaction remains limited, with 45.2% reporting neutral to dissatisfied views toward current OT practices. In addition, 43.3% report not receiving OT compensation. These factors correspond with 40.9% of IT professionals reporting consideration of job change related to OT workload and policy. (page 45)

67% of IT freelance projects demand came from Vietnam, while monthly income for IT freelancers stabilized at 30.7M VND per month, signaling a more domestic-sustaining IT freelance market.

- In 2025, the center of IT freelance demand shifts from the US to Vietnam, with domestic projects accounting for 67% (more than double the 30% recorded in 2024), while the share of US-origin projects declines from 36.2% to 24.1%. (page 58)
- Web Development remains the most in-demand freelance project type at nearly 40%. The second and third most common categories remain unchanged from 2024: Mobile App Development (12.2%) and Project Consulting (8.5%). (page 58)
- Despite changes in project demand sources, IT freelancers maintain strong earning levels, averaging 30.7 million VND per month and USD 34 per hour, mainly stable compared to 2024 (30.9 million VND and USD 35.5 per hour). Mobile App Development became the highest-paid project type (averagely 37.9 million VND), and Project Consulting offered the highest hourly rate at 1,630,000 VND/hour (~63 USD). (page 59)

IT students show strong interest and academic commitment, but limited practical exposure and basic English proficiency continue to constrain job readiness.

- Most IT students report high interest in their university programs, with 62.3% rating their interest at 8–10 points. The highest satisfaction areas are strong faculty with industry experience and research expertise, and good industry connections, including guest lectures and tech partnerships (both rated from 42.3% IT students). (page 64)
- They invest heavily in academic outcomes, as 54.1% aim for top achievable GPA and 50.3% take additional courses. However, practical preparation remains limited: Only 40.8% of IT students have participated or are currently participating in internships at IT departments or companies, 28.3% gain freelance experience, 26.4% join projects or hackathons, and 18.2% participate in soft-skill clubs. While 57.8% of students who work for freelance job, engage in paid freelance work and internships provide modest income (6.9–8.0 million VND/month), these experiences are often short-hour and network-driven, offering limited workplace readiness. (page 66)
- English improvement is recognized as a priority by 59.1% of students, yet overall proficiency remains low, with an average self-rating of 1.68/5, particularly weakest in communication and presentation skills. Combined with technical capability gaps, weak soft skills, and rising entry-level hiring expectations, this contributes to persistent job-readiness concerns and anxiety among IT students as they transition from education to the labor market. (page 64, 65)

PART 03

IT MARKET OVERVIEW

Vietnam's IT Market: From fast growth to the strategic destination for global tech investment

Vietnam is positioned as a strategic high-growth outlier in the ASEAN region, defined by both its robust macroeconomic stability and a unique, structurally advantageous digital landscape.

1. Macroeconomic Resilience

The stability and resilience of Vietnam's macroeconomic environment provide a crucial foundation for long-term investment decisions. Amid global economic volatility, the nation has delivered the best economic performance in the region, recording its second-best quarterly performance since 2020 and its strongest first-half performance in over a decade ([McKinsey & Company, 2025](#)). This superior macroeconomic performance is a strong signal of economic resilience and a favorable business environment, effectively mitigating overall economic risk for technology investors.

Real GDP Growth Rate vs Previous Period by Vietnam and other ASEAN countries (%)

	2022	2023	2024	Q3-2024	Q4-2024	Q1-2025	Q2-2025
Indonesia	5.3%	5.1%	5.0%	5.0%	5.0%	4.9%	5.1%
Malaysia	8.7%	3.7%	5.1%	5.3%	4.9%	4.4%	4.4%
Philippines	7.6%	5.6%	5.6%	5.2%	5.3%	5.4%	5.5%
Singapore	4.1%	1.8%	4.4%	5.7%	5.0%	4.1%	4.4%
Thailand	2.6%	2.0%	2.5%	3.0%	3.3%	3.2%	2.8%
Vietnam	8.0%	5.0%	7.1%	7.4%	7.6%	6.9%	8.0%

Source: McKinsey & Company (2025) Southeast Asia quarterly economic review: A short-term spark?

2. Digital Market Acceleration

Vietnam's strong digital economy momentum is increasingly reflected in tangible economic scale and value creation. The rapid expansion of digital enterprises, ICT employment, and revenue in 2024 reinforces the earlier insight that Vietnam's digital growth.

Vietnam is one of the fastest-scaling digital economy in Southeast Asia while E-commerce dominates Vietnam's digital economy, creating scale quickly but also structural dependency ([Google, Temasek, & Bain & Company \(2025\). Vietnam economy SEA 2025 report](#)).

Vietnam recorded around 20% growth in its digital economy in 2023, the highest in ASEAN, reaching approximately US\$30 billion in gross market value. This expansion is largely driven by consumer-oriented sectors such as e-commerce, ride-hailing and food delivery, online travel, and digital media, which together form the core of Vietnam's internet economy. Moreover, Vietnam's forecasted digital economy by 2030F is highly positive, ranking second only to Indonesia.

Vietnam ICT Industry Growth Scale In 2024

73,788 digital technology enterprises
Increase of 10.1% year-on-year

1.26 million workers
employed in the Information and Communication Technology (ICT) sector

Vietnam Economic Contribution in 2024

US\$ 158B Total revenue of Vietnam's digital tech companies.
Increase of 10.2% year-on-year

US\$ 158B Export revenue from hardware & electronics
Increase of 10.4% year-on-year

US\$ 11.5B Total overseas revenue from 1,900 digital tech enterprises.
Increase of 54% year-on-year

31.8% Share of total ICT industry revenue contributed by domestic value-added in ICT.
Increase of 3.1% year-on-year

Source: KPMG (2025). Vietnam 2026 Outlook: A Defining Moment for Growth. KPMG in Vietnam.

Digital economy (GMV-\$B) and Growth Rate of Vietnam and other Asean countries

	Digital economy (GMV-\$B)				Growth Rate
	2023	2024	2025	2030F	2024-2025
Indonesia	80	87	99	~180 -340	+14%
Malaysia	26	33	39	~45 -70	+19%
Philippines	26	31	36	~70 -140	+16%
Singapore	25	27	29	~40 -65	+7%
Thailand	38	49	56	~90 -160	+16%
Vietnam	30	34	39	~85 -190	+17%

Source: Google, Temasek, & Bain & Company. (2025). Vietnam economy SEA 2025 report

3. Three Pillars Driving Vietnam's Digital Acceleration

Vietnam's digital transformation is shifting from short-term growth to structural momentum.

Digital acceleration in Vietnam is no longer driven mainly by cyclical or opportunistic factors. The simultaneous alignment of market demand, workforce capacity, and policy direction indicates that digitalization is becoming embedded in the economic structure. This creates a more stable and predictable environment for companies planning medium- to long-term technology investment and deployment.

Digital talent is emerging as a valuable competitive advantage.

Vietnam's large, young workforce and improving digital capabilities suggest a growing ability to absorb and scale advanced technologies. This strengthens the country's position not only in technology adoption but also in hosting higher-value activities such as product development, data, and AI-related functions.

Proactive government policy reduces execution risk and reinforces market confidence.

Clear digital priorities, investment incentives, and infrastructure development signal strong institutional commitment to digital growth. This active policy stance lowers barriers to entry and implementation for enterprises, reinforcing investor confidence and aligning national digital ambitions with private-sector execution.

Market Velocity & Innovation

- Digital Penetration:** At the start of 2025, there were 79.8 million individuals using the internet in Vietnam, when online penetration stood at 78.8 % ([DataReportal, 2025](#))
- E-commerce Traction:** Market value is US \$20 Billion, projected to grow at an aggressive CAGR > 25% (2023–2028).
- FinTech Scale:** Digital payments adoption is massive, evidenced approximately 30.27 million e-wallet users in 2025 ([Vietnamnet, 2025](#)). In addition, the number and value of payments via QR codes surged by over 170%. ([UOB, 2024](#))
- Venture Activity:** The ecosystem features 4,000+ startups, including two unicorns and dozens of near-unicorn enterprises ([Vietnam Innovative Startup Ecosystem 2025 Report](#)), ranking Vietnam among the Top 3 in ASEAN for venture capital activity. ([Vietnam Plus, 2024](#))

Talent & Demographics

- Golden Workforce:** The working-age population (15–64) accounts for approximately 68% of the total population ([KPMG, 2026](#))
- Formal Education Background:** 84% of IT professionals hold formal university-level degrees, validating the market's high qualification depth (IT Salary & Recruitment Market 2025-2025 Report, ITviec).
- Innovation Index:** Vietnam ranks 44th out of 139 economies in the 2025 Global Innovation Index (GII), placing it third in ASEAN. According to the report, Vietnam performed better in innovation outputs, ranking 37th, than in innovation inputs, where it stood at 50th ([Vneconomy, 2025](#))

Enabling Policy & Incentives

- Strategic Mandate:** Commitment is led by the National Digital Transformation Program (2020–2025) and the AI Strategy 2030, integrating "Make in Vietnam" technology into the economic plan. ([Government of Vietnam, 2025](#))
- Investment Incentives:** Tax incentives include 4-year Corporate Income Tax (CIT) exemptions and 9-year 50% CIT reductions in key tech zones (Hanoi, HCMC, Da Nang) to attract both domestic and foreign capital. ([Vietnam Briefing, 2025](#))

Together, these three pillars of Market, Talent, and Policies are accelerating Vietnam's rise as one of Asia's most dynamic digital economies. Powered by young talent, strong innovation, and forward-looking governance.

4. Urgent Priorities - The Deep Tech Mandate

In June 2025, the Vietnamese government issued Decision 1131/QĐ-TTg, identifying 11 strategic technologies such as Artificial Intelligence, Cloud Computing, Blockchain, Cybersecurity, and Semiconductors. This policy signals a major step toward deep-tech innovation and national digital sovereignty, shifting the focus from traditional IT services to advanced technology production and research. [\(Source: Office of the Prime Minister of Vietnam, Decision 1131/QĐ-TTg, 12 June 2025; luatvietnam.vn\)](#)

Vietnam Government Strategic Focus

- 1

AI and Digital Twin Technologies

 - Development of Vietnamese-language AI models and virtual assistants.
 - Application in smart manufacturing, healthcare, and urban planning through digital twin simulations.
 - Foundation for autonomous workflows and AI-driven decision systems.
- 2

Cloud, Data, and Semiconductor Infrastructure

 - Expansion of national-scale data centers and cloud services to enable large-scale AI training and analytics.
 - Focus on local chip design and fabrication to strengthen self-reliance.
 - Critical enabler for data sovereignty and secure digital transformation in enterprises.
- 3

Blockchain

 - Priority use in traceability, digital identity, and financial technology.
 - Encouraged development of Vietnamese blockchain platforms for supply chain transparency.
 - Key to ensuring trust and data integrity in digital transactions.
- 4

5G/6G Ecosystems

 - Accelerating deployment of open 5G and early 6G research for ultra-fast connectivity.
 - Foundation for IoT, edge computing, and smart factory applications.
 - Promotes integration between telecom and IT sectors for nationwide digital infrastructure.

A Promising Horizon for Vietnam's Tech Sector

- Vietnam's alignment between government policy and market momentum marks a defining point in its digital transformation journey.
- The nation's deep-tech priorities in AI, Cloud, Blockchain, and 5G are both strategic and economically catalytic, creating new opportunities for innovation, export growth, and high-value employment.
- As these technologies advance, Vietnam is well positioned to become a regional leader in digital innovation, supported by a strong, skilled, and forward-looking IT ecosystem.

(Sources: Office of the Prime Minister of Vietnam, Decision 1131/QĐ-TTg, June 2025; ITviec Vietnam IT Professional Survey 2025)

5. Technology Trends in Enterprises and the IT Professional Community

Among Tech trends, IT professionals highlight AI agents and GenAI as the most strongly expected to grow technologies, aligning closely with national deep tech priorities.

Two third of the surveyed IT professionals claim that AI Agents and autonomous workflows show the strongest momentum, with 65.2% selecting this to be the fastest progressing tech trend in Vietnam in 2026. GenAI and LLM technologies follow closely, highlighted by 54.6% of IT Professionals. Other emerging areas also gain attention, including Edge AI and 5G IoT at 22.4%, no or low code platforms at 18.1%, and Web3 or blockchain at 17.8%. These results show that the technologies prioritized in the government's deep tech mandate are also the ones most recognized by IT Professionals as advancing in the real market.

Overall, IT professionals' responses indicate a strong alignment between national policy direction and the actual adoption momentum observed across the IT community.

Top 5 Technology Trends Expected to Grow Significantly In Vietnam In 2026

Generative AI leads relative to other emerging technologies in practical deployment readiness, while AI Agents and Edge AI are perceived to face greater scaling challenges.

Tech Trend Adoption Status Based on IT Professionals' View of Their Companies

Progress of Tech Trend Adoption as Evaluated by IT Professionals In Vietnam

Disclaimer: as an indication of how popular and familiar each technology trend is among the overall IT Professional community. The adoption status and progress shown in this chart are reported by IT Professionals about their companies. These responses reflect individual viewpoints and do not represent formal company level adoption metrics. Multiple IT Professionals may work at the same company, so the results cannot be interpreted as company specific data. The findings should be understood

- Generative AI and LLM** technologies continue to lead overall progress. Among all trends, GenAI and LLM fine-tuning or RAG show the strongest momentum, with high levels of “Pilot” to “Scaled” activity and the highest share of “Good” and “Very good” progress ratings. This indicates early implementation success and strong enterprise confidence.
- No or Low Code platforms and hyper-automation** show strong early interest, with many IT Professionals report their companies currently in the “Pilot” to “Limited Production” phase. Yet they also record a high percentage of “Poor and below” progress ratings, indicating significant challenges in converting early assessments into successful, scalable rollouts.
- Web3 / Tokenization / Blockchain** remain the slowest-moving trend. Most IT professionals report having no adoption plans, and this limited traction is reflected in the lowest progress evaluations across all technologies.
- AI Agents and Edge AI** both attract strong engagement, reflected in high levels of “Exploring” to “Pilot” activity. However, Edge AI is progressing more slowly than AI Agents. Its higher share of “Poor and below” and “Below average” progress ratings indicates that many organizations still struggle to move from experimentation to deployment. This slowdown stems from specialized hardware requirements, fragmented device environments, tougher real-world performance demands, limited embedded-systems expertise, and heightened security concerns — making Edge AI significantly harder to scale than cloud-based AI Agents.

AI Adoption in Vietnamese companies: Based on findings from the report “Vietnam AI Adoption and IT Hiring Landscape 2025” published by ITviec, AI is being widely adopted across companies. However, the depth of implementation remains limited, primarily due to concerns around the reliability and trustworthiness of AI-generated outcomes.

- **High Volume Adoption:** The application of AI is now mainstream, with 73% of companies adopting it. Generative AI is the dominant technology, driving this rapid adoption primarily across multiple support functions like IT, Marketing, and Customer Service.
- **Limited Strategic Depth:** Despite the high adoption rate, AI implementation is generally immature. Most initiatives are confined to “Pilot” or “Operationalizing” selected workflows, while only a small percentage (11.6%) achieves “Enterprise-Wide” scaling. AI is currently applied more in selective or foundational workflows rather than enterprise-wide, multi-functional automation.
- **Critical Trust Barrier:** A significant constraint is the profound lack of trust, with only 5.4% of companies relying on AI outputs with minimal human review. This limits AI to a supervisory role, preventing it from deeply integrating into core business processes and realizing its full transformative potential.

AI Adoption Status By Companies In Vietnam

AI Adoption Result By Companies In Vietnam

Base: Companies that have adopted AI

Source: ITviec | Vietnam AI Adoption Status & IT Hiring Insight 2025 Report

AI Usage by IT Professional: AI usage is now mainstream among IT professionals, with heavy reliance on personal tool account and GenAI chatbots.

- **AI usage among IT Professionals is already mainstream.** Nearly **96.8%** use AI daily for work, marking a major shift in behavior. Over half rely mainly on **personal AI accounts**, showing that company provisioning has not yet kept pace with workflow needs.
- GenAI chatbots dominate with 77.1% usage, and AI coding assistants are used by 50% of IT Professionals.

These results reflect fast growing dependence on AI for productivity, coding, and problem solving. They also highlight an urgent need for companies to develop clearer AI governance and enablement strategies.

Source: ITviec | Vietnam AI Adoption Status & IT Hiring Insight 2025 Report

AI is perceived to be deeply embedded in IT professionals' daily workflows and strongly associated with gains in productivity and coding efficiency.

AI is now deeply embedded in daily IT work, and its adoption is being driven bottom up by IT professionals:

- The highest used AI tasks are core workflows such as code generation, debugging, knowledge research, and content automation. This shows AI is no longer experimental. It is already part of the standard toolkit for most IT professionals.
- 94.2% IT professionals reporting higher productivity from AI usage and is largely self-driven at the individual level. It could be suggesting that individual-level AI adoption is progressing faster than formal organizational standardization.

The strongest value of AI is research and problem-solving. Time saved on research and information gathering is the most improved area. IT professionals rely on AI as an extension of their analytical ability, not just a coding assistant.

Confidence and trust in AI are high, but accuracy is still a big concern. Almost 90% trust AI output when reviewed, while only 42.5% rate AI accuracy in software tasks as high or very high. This shows a reliance mindset, but also a clear need for validation and human oversight.

Top 10 Performance Areas Most Improved for IT Professionals With AI Assistance

Impact of AI on Overall Productivity of IT Professionals

IT Professionals Evaluation of AI Accuracy for Software Development Tasks

Trust Levels in AI Output Among IT Professionals

GenAI chatbots and coding assistants account for the highest share of AI usage among IT professionals, with ChatGPT, Gemini, and GitHub Copilot as the top tools.

AI usage among IT Professionals is still driven by personal productivity tools. Generative AI chatbots lead clearly (77.1%), followed by AI coding assistants (50.0%).

More advanced areas like cloud AI and in-house AI remain limited among IT professionals, showing that enterprise-level adoption is still early. Tool rankings further confirm this trend, with ChatGPT and GitHub Copilot dominating usage.

These numbers reflect IT Professionals' experience, not company-wide adoption rates.

In the broader context, IT hiring strategies for 2026 are being reshaped, shifting from large-scale expansion toward more selective growth.

Vietnam's IT recruitment landscape in 2025-2026 shifts decisively away from the aggressive expansion cycles of five years ago. Instead of large-scale hiring, companies are now prioritizing selective, capability-driven growth.

- Data from 2020 to 2026 highlights a clear structural shift in Vietnam's IT hiring landscape. The share of companies in the very high growth ("we're on fire", >50%) category declines significantly, from approximately 18.6% in 2020 to around 11% in 2026. Similarly, the proportion of high-growth companies (31-50%) no longer dominates as it did in earlier years, indicating a retreat from large-scale expansion cycles.
- In contrast, smaller and more selective hiring has become increasingly prevalent. The moderate growth segment (11-30%) remains consistently high and reaches approximately 31% in 2026, while the share of companies reporting no growth or workforce reduction rises sharply, from 4.9% in 2021 to around 31% by 2026. This shift reflects a broad move toward cautious, efficiency-focused hiring strategies.
- Overall, Vietnam's IT recruitment market has transitioned from being driven by a smaller group of companies hiring at scale to a landscape where more companies hire fewer roles but with higher capability requirements. Hiring decisions now emphasize immediate contribution, adaptability, and cross-functional skill sets rather than headcount expansion. This reflects a maturing market shaped by economic uncertainty, tighter workforce planning, and accelerating AI adoption, which collectively push organizations toward more strategic and selective hiring.

Plan To Grow IT Team In The Period Of 2020 - 2026

(*) Disclaimer: Data for 2025 is based on first-half (1H-2025) results only and therefore does not represent a full-year outcome. However, the "Plan to grow in 1H-2025" data is still considered valid and appropriate for reference, as it captures the most recent market conditions, hiring behaviors, and strategic direction during the year.

The current economic and market conditions are prompting companies to reassess and adjust their operational and growth strategies.

A cautious approach combined with AI adoption to optimize efficiency is shaping IT hiring in the 2025–2026 period.

Economic caution remains dominant in 2026

Economic sentiment in 2026 remains cautious across both markets, with neutral views at 40.0% globally and 36.7% in Vietnam. Meanwhile, pessimistic and very pessimistic sentiment accounts for 46.7% globally and 49.7% in Vietnam, indicating continued uncertainty and elevated risk awareness.

Optimism is present but limited

Positive sentiment remains restrained, with optimistic sentiment remains limited, at 13.3% in both global and Vietnam forecasts. This suggests that confidence exists but is not yet strong enough to support broad-based expansion.

2026 marks a clear shift in companies’ operational strategies, with 47.5% prioritizing the integration of AI into core business processes.

- **2026 marks a shift toward AI-driven operational transformation**, with 47.5% of companies prioritizing AI integration into core business processes.
- Alongside this, businesses continue to **emphasize operational efficiency improvement** (28.8%) and **operational cost reduction** (25.4%), reflecting pressure to create leaner and faster operations.
- At the same time, 27.1% of companies are **focusing on developing new products or services**, indicating that efficiency efforts are not only defensive but are also intended to unlock new growth opportunities.
- **Enhancing employee engagement and satisfaction** (22.0%) rounds out the top strategic priorities, showing a balanced approach between technology, efficiency, and people.

Top 5 Company Strategies In 2026

Company Strategy	2026
Integrate AI into core business processes	47.5 %
Operational efficiency improvement	28.8 %
Develop new products or services	27.1 %
Operational cost reduction	25.4 %
Enhance employee engagement & satisfaction	22.0 %

PART 04

COMPANY STRATEGY & HIRING DEMAND

2025 marks a strong rebound in IT headcount actual growth.

- **IT hiring rebounded strongly in 2025:** 66.1% of companies increased their IT headcount in 2025, reflecting a clear recovery in digital investment and project expansion. Only 1.7% had no hiring activity, showing that recruitment remained active across nearly all businesses despite macro uncertainty.
- **A significant share of companies are holding steady or reducing headcount:** A combined 33.9% of companies are not expanding or reducing their IT teams in 2025, with 20.9% maintaining team size and 11.3% reducing headcount through layoffs (7.8%) or not replacing voluntary turnover (3.5%), and no change due to no new recruitment activity in 2025 (1.7%)

This reflects a parallel trend toward efficiency-driven workforce strategies, where businesses prioritize cost control, productivity optimization, and selective restructuring. While not the dominant group, it signals pockets of caution and uneven stability within the IT job market.

Companies' IT Headcount Change in 2025

IT recruitment funnel highlights a highly selective and competitive hiring process in 2025.

- **Screening remains selective:** 38.2% of applications progress past the screening stage, indicating tighter initial filtering and more defined hiring criteria.
- **Offer conversion shows moderation:** 48.4% of interviewed candidates receive offers, with 60.9% of offers converting into onboarding, suggesting continued competition and selectivity at later stages.
- **Probation outcomes are stable:** 82.1% of onboarded candidates pass probation, reflecting alignment between hiring decisions and IT role requirements.

Average Conversion Rate Between Stages In IT Recruitment in 2025

(*) Conversion rate (%) = (Number at next stage / Number at previous stage) × 100

IT hiring in 2025: Core engineering roles continue to dominate the demand, concentrated in Ho Chi Minh City, with companies prioritizing mid and senior-level talent.

- **Core engineering roles continue to dominate demand:** Back-end Developer (**54.2%**), Full stack Developer (**45.8%**), and Front-end Developer (**31.3%**) stand as the top three most in demand roles. This confirms that product engineering remains the backbone of hiring, with companies prioritizing teams that directly build and scale digital platforms.
- **Companies focus heavily on mid level and senior talent in 2025**

Mid level hiring dominates at 76.8%, followed by Senior at 62.2%, showing a clear preference for experienced talent who can deliver quickly without the high cost or strategic responsibility of top management roles. This reflects a hiring strategy centered on productivity, speed, and immediate value creation.

- **Hiring activity remains strongly concentrated in Ho Chi Minh City**

Ho Chi Minh City maintained its dominance with 71.1% of all hiring in 2025. Hanoi share was 26.5%, while Danang was accounted for 2.4%, remaining a very small contributor.

Top 10 In-demand IT Positions In 2025

No	Most In-demand IT Position	2025
1	Back-end Developer	54.2%
2	Full-stack Developer	45.8%
3	Front-end Developer	31.3%
4	Business Analyst	22.9%
5	Tester	21.7%
6	QA-QC	20.5%
7	DevOps Engineer	16.9%
8	Mobile Developer	14.5%
9	Project Manager	13.3%
10	Tech Lead	10.8%

Cities That Hired The Most IT Employees In 2025

Management Level Hired In 2025

Rising talent gaps and skill mismatches challenge IT hiring, yet competitive compensation and work flexibility remain among the most important drivers of talent attraction.

1

Talent quality gaps and salary expectations remain the biggest barriers in IT hiring

The top recruitment challenges in 2025 revolve around talent quality and compensation mismatch. 55.4% of companies report candidate quality being lower than expected. Meanwhile, 48.2% say candidates expect higher salaries than companies can offer.

These pressures show that talent standards are rising faster than supply, pushing employers to compete more aggressively for strong candidates while trying to manage controlled hiring budgets.

2

Employers face increasingly struggle with language skills and technical screening

Challenges related to foreign language capability and technical competency intensified in 2025. Candidates lacking strong foreign language skills (33.7%) and those failing technical tests (21.7%)

This signals a widening skills gap where demand for global readiness, communication, and hands on technical ability is outpacing talent preparedness. Companies face growing difficulty meeting international project standards and cross border client requirements.

3

Competitive salary and flexibility remain the most effective levers for IT talent attraction

In 2025, the most compelling values for attracting IT hires remain consistent. Competitive salary (78.3%), remote or hybrid options are 50.6% and flexible work hours reached 44.4%. Notably, clear career paths (38.6%) and company product/project (26.5%) also gained value in top 5 and 6.

These benefits continue to be the strongest differentiators in a competitive hiring landscape in the next year, showing a strong alignment between what employers offer and what IT professionals seek in terms of financial security and long-term growth potential.

Top 10 Challenges Of IT Recruitment In 2025

No.	Top 10 main challenges when recruiting IT talents	2025
1	Quality of candidates is lower than expected	55.4%
2	Too many candidates expect higher salary than the company can offer	48.2%
3	Too few candidate have strong foreign language skill (e.g.: English, Japanese..)	33.7%
4	Quantity of candidates is lower than expected	25.3%
5	Too tight timeline to recruit (project or requirement change quickly etc.)	25.3%
6	Candidates do not match with the company culture	22.9%
7	Too many candidates did not pass the technical/coding tests	21.7%
8	Limited salary budget	21.7%
9	Difficult to align with hiring managers' demands about job requirements	21.7%
10	Candidates are not interested in or aware of the employer brand	20.5%

Top 10 Effective Benefit/Value For Attracting New IT Hires In 2025

No.	Top 10 most effective benefit/value to attract IT talent	2025
1	Competitive salary	78.3%
2	Remote/Hybrid work options	50.6%
3	Flexible work hours	44.6%
4	Positive work environment	38.6%
5	Clear career paths and promotions for IT employees	38.6%
6	Company Product/ Project	26.5%
7	Attractive Healthcare Insurance program	21.7%
8	Company culture that prioritizes employees' wellbeing, work-life balance	19.3%
9	Modern technology and equipment	16.9%
10	Fun company culture	14.5%

In 2025, companies place stronger emphasis on problem solving, adaptability, and professional behavior, expanding far beyond traditional technical evaluations.

Instead of relying primarily on static technical credentials, employers now assess a broader combination of skills that includes real-world problem solving, adaptability to new technologies, and professional behaviors that ensure delivery readiness. This reflects the market's growing need for engineers who can learn quickly, collaborate effectively, take ownership, and operate with resilience in fast-changing, AI-driven environments.

#1

Technical skills remain essential, but are no longer sufficient on their own

Employers continue to value strong technical foundations, yet the hiring bar is expanding. Companies now expect candidates to pair coding proficiency with the ability to solve real problems, collaborate effectively, and demonstrate greater ownership in fast-changing environments.

#2

Criteria for work attitude and professionalism during hiring process

Professionalism during the hiring process, communication skills, teamwork, and cross-functional collaboration are becoming core evaluation factors. This shift shows that companies prioritize candidates who can deliver reliably, work well with diverse teams, and adapt to organizational expectations beyond pure technical skills.

#3

Adaptive mindset and AI readiness are increasingly important requirements

Employers increasingly expect IT candidates to demonstrate an adaptive mindset and readiness to work with AI-driven tools and workflows. Instead of focusing solely on technical credentials, companies now require engineers who can learn quickly, embrace continuous improvement, and operate effectively alongside emerging AI technologies.

Top Important Factors To Evaluate IT Candidate In 2025

No	Important Factors To Evaluate IT Candidate	%
1	Problem-solving ability in real-world technical challenges	44.6%
2	Adaptive mindset & willingness to learn new technologies (AI, digital tools)	43.4%
3	Ownership and accountability (takes initiative, responsible for outcomes)	39.8%
4	Hands-on technical proficiency (e.g., coding, debugging, system design relevant to the role)	37.3%
5	Ability to learn quickly and adapt to new technologies/environments	36.1%
6	Professionalism during the hiring process (punctuality, responsiveness, positive attitude)	34.9%
7	Team collaboration and cultural fit (openness to feedback, cross-functional teamwork)	34.9%
8	English proficiency for technical collaboration, documentation, or client interaction	31.3%
9	Strong communication skills (verbal and written, including technical discussions)	28.9%
10	Performance in practical assessments (e.g., Leetcode/HackerRank, hackathons, case study challenges)	25.3%
11	Code quality and documentation practices (through tests or past projects)	24.1%
12	Experience with modern technologies/tools (e.g., React, Node.js, Kubernetes)	22.9%
13	Past performance in similar roles/projects (e.g., successful product delivery)	15.7%
14	Ability to integrate AI tools into workflow/software development process	14.5%
15	Other foreign language proficiency (e.g., Japanese, Korean, German)	13.3%

Technical Skills and Professional Competence

Work Attitude and Personal Traits

Soft Skills and Team Fit

IT Salary Plans for 2026 remain cautious, with most companies planning minimal inflation aligned adjustments and only a small share offering stronger increases.

Salary plans for 2026 indicate a measured compensation outlook:

- **A large share of companies plan only minimal adjustments, mostly aligned with inflation.**

Salary plans for 2026 indicate a cautious outlook, nearly half of the companies (46.1%) plan for no increase or increase slightly, with 26.1% companies adjusting salaries within the 1–5% increase range while 20.0% expect no change. Vietnam’s inflation has recently averaged around 3% to 4% ([Trading Economics, 2025 CPI data](#)), indicating that these adjustments are primarily aimed at keeping pace with inflation rather than enhancing compensation competitiveness.

A smaller portion of companies plan moderate to strong salary increases.

More substantial increases are limited to targeted segments, with 26.1% planning hikes of 6–10% and only 14.8% considering increases above 10%.

- **Salary reductions remain limited but present in specific cases.**

Overall, the data reflects a cautious approach to salary reductions, with a total of 13% of companies planning to cut wages. Among these, salary reductions exceeding 10% account for nearly 8%, while more modest cuts of 1–10% remain relatively limited at 5.2%.

Companies’ IT Salary Plans in 2026

IT Hiring Plans in Vietnam move from strong expansion in 2024 to a strategic slowdown in 2025 before rebounding in next year 2026.

Company growth plans show a clear three phase pattern across 2024 to 2026.

- In 2024, hiring momentum is strong with 73.0% of companies expanding their IT teams and no reductions reported. This shifts noticeably in 2025, where growth intentions decline to 60.7% in the first half and further to 48.6% in the second half, accompanied by rising “No growth” responses and reductions reaching 13.4%.
- These movements reflect a strategic pause driven by cost pressures, economic uncertainty, and evolving operational priorities.
- **Entering 2026, confidence returns as 69.6% of companies plan to resume IT team expansion and reductions fall to 7.0%, signaling renewed optimism and readiness to reinvest in technology capabilities.**

Plan to Grow IT Team from 2024–2025–2026

AI driven productivity and stable workloads are main reasons for reducing IT hiring needs in 2026, while the impact of fewer new projects has eased significantly.

- **AI-driven productivity is increasingly cited as a reason for reducing additional IT hiring needs.**

The share of companies not expanding due to AI driven productivity increases sharply from 5.9% in 2024 to 34.3% in 2026, indicating that automation and improved tooling are materially lowering the demand for new hires. Companies are increasingly able to perform the same or greater workload with fewer incremental resources.

- **Stable workloads and stronger performance lower hiring demand.**

The proportion of companies stating that they are operating efficiently without needing more staff rises from 17.7% to 34.3% over the same period. This suggests more stable workloads, better team utilization, and higher operational maturity, which collectively reduce pressure to expand headcount.

- **Cost optimization pressures continue to ease.**

Companies citing cost optimization as the reason for no growth decline significantly from 29.4% in 2024 to 14.3% in 2026. This signals reduced financial strain and improving business confidence, shifting the primary rationale for cautious hiring from budget constraints to internal efficiencies.

- **Temporary external factors become less influential.**

Reasons such as investment changes or project volume fluctuations decrease over time, indicating that these were short-term disruptions rather than ongoing structural barriers. As these factors stabilize, they play a smaller role in shaping no growth or reduction hiring plans.

Top Reasons For No Growth/Reduction Plan from 2024-2025-2026

No	Top Reasons For No Growth/Reduction Plan	2024	1H-2025	2H-2025	2026
1	We plan to increase productivity through the implementation of AI	5.9%	15.4%	24.7%	34.3%▲
2	We are doing great, no demand to recruit more	17.7%	N/A	12.3%	34.3%▲
3	Significant cost optimization is required	29.4%	23.1%	11.0%	14.3%
4	Standing by for the economic situation to improve	17.6%	N/A	16.4%	5.7% ▼
5	Status of investment has changed (being acquired, next round funding)	5.9%	19.2%	5.5%	5.7%
6	The number of new projects is decreasing	17.6%	23.1%	16.4%	2.9% ▼
7	Management level changed (changed BOD, IT Director left)	5.9%	7.7%	5.58%	0% ▼

Nearly two third of the surveyed companies plan to increase AI budget, expanding AI team and typical challenges in AI talent acquisition.

According to findings from the “**Vietnam AI Adoption Status and IT Hiring Insight Report 2025**”, published by ITviec in August 2025, AI talent structures in Vietnam are gradually taking shape as enterprises increase investment in response to AI’s growing strategic importance. However, high costs, scarce AI skills, and rising retention risks remain critical constraints to sustainable scaling ([ITviec, 2025](#))

- **AI talent structures are gradually taking shape, slowly but steadily**

40.5% of companies now have a dedicated AI team, while another 34.2% rely on cross-functional teams. Most current AI teams remain small (under 10 people), yet the momentum is clear: 62% of companies plan to grow their AI teams in the next 12 months.

- **AI’s growing importance drives increased corporate investment**

Nearly two third of surveyed organizations (65.1%) plan to increase their AI budgets, with 27.9% project a moderate increase (10–20%), and 11.6% plan increases above 20%. Meanwhile, a notable 25.6% report slightly increase (1–9%), and only 4.6% expect decreases which revealing the high level of confidence for continuous AI investment, even amid high expectations.

- **Urgent pain points regarding AI talent recruitment: High cost, scarce skills, and retention risks**

Vietnamese companies embracing AI transformation are facing an immediate roadblock: recruiting qualified AI talent. Data in the survey shows 54.3% of businesses cite high salary demands as the top hiring challenge, while 41.0% struggle to find candidates with practical AI experience, and 34.3% face a shortage of specialized AI skills.

Increase in AI Budget In The Next 12 Months

Dedicated AI Team Status

Size Of AI Team In The Next 12 Months

Top 10 Challenges When Recruiting AI Talents

No	Challenges When Recruit AI Talents	%
1	High salary/compensation demands by candidates	54.3%
2	Lack of practical, hands-on AI experience in candidates	41.0 %
3	Scarcity of highly specialized or niche AI skills	34.3 %
4	Intense market competition (from local & MNCs in Vietnam/SEA)	25.7 %
5	Insufficient soft skills in candidates (communication, business acumen)	20.0 %
6	Difficulty in assessing candidates' AI skills	16.2%
7	Challenges in retaining hired AI talent (high turnover)	16.2%
8	Unattractive company benefits for AI talent	14.3%
9	Employer brand not yet a top brand for AI talent in Vietnam	10.5%
10	Few local candidates with relevant advanced degrees/certifications	10.5%

Source: ITviec, *Vietnam AI Adoption and IT Hiring Report 2025*, published August 2025.

Base: Companies that have adopted AI.

2026 recruitment focuses on experienced engineering talent, with strong demand for DevOps, Cloud, Data expertise, and collaboration focused soft skills.

• **Cloud, DevOps, data, and system design form the core expertise areas companies plan to strengthen**

On technical capabilities, demand centers on skills that support large-scale digital and cloud transformation. DevOps & CI/CD (53.1%), cloud computing & multi-cloud (48.4%), database management (34.4%), and data engineering (28.1%) rank as the top expertise areas companies plan to recruit in 2026.

• **Collaboration, communication, and problem-solving rank as essential soft skills for 2026 hiring**

Complementing these technical needs, employers place strong emphasis on foundational soft skills, led by collaboration/teamwork (52.3%), communication (49.2%), English proficiency (46.2%), and problem-solving (41.5%), showing that technical proficiency alone is no longer sufficient for modern engineering teams.

• **Hiring demand concentrates heavily in Ho Chi Minh City and targets mid-senior talent levels**

In 2026, IT hiring demand is highly concentrated in Ho Chi Minh City, accounting for 67.7% of all planned recruitment, reinforcing its position as the country's primary technology hub. Companies also show a clear preference for experienced talent, and more than 40% identify these as the most prioritized levels for hiring.

Top 10 Expertise Planned To Recruit In 2026

NO	EXPERTISE	%
1	DevOps & CI/CD (Docker, Kubernetes, GitHub Actions)	53.1%
2	Cloud computing & multi-cloud (AWS, Azure, Google Cloud)	48.4%
3	Database management (SQL, NoSQL)	34.4%
4	Data engineering & big-data pipelines (ETL, Spark, Airflow)	28.1%
5	Project management (Agile, Scrum, Kanban)	28.1%

Cities Planned To Recruit In 2026

Management Level Planned To Recruit In 2026

Core engineering, popular programming languages, and modern libraries & framework skills account for the largest share of hiring demand.

- **Core engineering roles remain the backbone of hiring demand in 2026:** Hiring plans for 2026 show that Full-stack Developer (50.8%) and Back-end Developer (47.7%) roles continue to dominate, reflecting companies' focus on building scalable digital products and upgrading core systems.
- **Java (67.2%) and JavaScript (57.8%) remain dominant languages, with Python, C#, and SQL forming the next core layer of demand.**
- **Modern libraries & frameworks, cloud-oriented stacks gain prominence for 2026 hiring:** Beyond core languages, the third chart highlights framework-level demand, showing where companies are modernizing their technology stacks.

Overall, the 2026 IT hiring landscape shows that companies are strategically strengthening full-stack capability, backend robustness, and modern frontend frameworks, while selectively expanding skills in data, AI-enablement, and mobile development. This aligns closely with broader business priorities for 2026, including AI integration, operational efficiency, and new product development.

Top 15 Programming Languages Planned To Recruit in 2026

Top 15 Libraries & Frameworks Planned To Recruit in 2026

HR strategies in 2026 focuses on capability building and talent retention through better experience, career paths, and employer branding.

To support the business transformation, companies are strongly investing in workforce capability: 45.9% plan to invest in training programs to enhance employee skills, 30% aim to design flexible job and career paths, 28.5% will increase budget for employer branding activities.

Top 5 Companies’ HR Plans In 2026

Company Strategy	2026
Invest in training programs that will improve employee capabilities	45.9%
Design flexible job and career paths based on employee capabilities	30.0%
Increase the budget for employer branding activities	28.5%
Increase the budget for recruiting channels	26.0%
Develop policies to support maintaining work life balance (reduced working hours, no overtime, ...)	26.0%

Companies accelerate investments in modern recruitment tools, HR analytics, and productivity-enhancing initiatives.

The prioritization in 2026 reveals a clear shift toward data and technology-enabled applications in HR and recruitment:

Modern HR & recruitment technologies are rapidly rising. Social media recruitment now leads at 50.8%, HR analytics and data insights investment follows with 44.4%, then Enhancing IT job postings (38.5%) and Expanding CV database access (36.9%). This signals strong movement toward data-driven talent acquisition and broader digital reach.

Stronger focus on improving candidate and employee experience by prioritizing Improving candidate experience during recruitment process (32.3%), Increasing employee salaries and Enhancing welfare and benefits (both 29.2%). These statistics prove that companies are recognizing the good experience, clarity, and value proposition matter more than ever in attracting and retaining IT talent.

Top 10 Initiatives To Invest In/Develop More in 2026

Job sites remain the most widely prioritized recruitment channel in 2026, capturing the highest budget allocation as companies prioritize reach, reliability, and consistent access to IT talent.

The 93.8% of companies investing in job sites in 2026 suggests that most employers prefer job sites as a go-to channel for their talent pool scale and effectiveness.

Preferred Recruitment Channels For Budget Allocation In 2026

Candidate screening and HR automation dominate AI use cases in HR activities, raising further questions on bias, transparency, and fairness.

According to findings from the “Vietnam AI Adoption Status and IT Hiring Insight Report 2025”, published by ITviec in August 2025:

The “Top 10 AI Applications in HR Activities” table highlights a strong emphasis of AI in the early stages of the talent acquisition lifecycle. Candidate screening & shortlisting (62.5%), Content Creations & HR Document Automation (59.4%) lead the pack.

Beyond the numbers, AI’s growing role in recruitment brings serious considerations around bias and transparency. Automated tools risk filtering out highly qualified candidates especially in IT whose non-traditional CVs or unconventional career paths may not align with rigid AI filters. This not only reduces diversity but also risks missing out on top-tier talent that companies are working so hard to attract

To implement AI effectively in recruitment, businesses should combine AI with human judgment is essential to ensure a well-rounded evaluation that preserves emotional and soft skill considerations. Transparency in how AI is used, and safeguarding candidate data are also critical for building trust and strengthening employer branding.

Finally, organizations should invest in technology and training while regularly reviewing and refining AI processes to reduce bias and improve accuracy.

AI/GenAI Adoption Status in HR operation in 2025

OVERALL

TRAITS OF IT

PROFESSIONALS

& OVERTIME

INSIGHT

Based on surveyed IT professionals, Vietnam's IT workforce appears relatively mature, well educated, and geographically concentrated, with talent needs primarily centered on mid-to-senior career stages.

ITviec respondent data reflects a diverse yet predominantly mid-to-senior group of professionals, concentrated in major hubs such as Ho Chi Minh City and Hanoi. Education levels are strong, with 85.6% holding a Bachelor's degree, and most respondents falling within the 27-35 age range, indicating a mature segment with solid technical foundations and practical project experience.

Gender

85.2%

IT Professional are Male

Living City

63.8%

IT Professional are living in Ho Chi Minh City, Following is Ha Noi (31.3%) and Da Nang (4.9%)

Age

84.6%

IT Professional are 27+ years old, which is the maturity ages in workplace

IT Professional Educational Attainment

IT Professional Academic Background

The data suggests an experienced and delivery-ready IT talent pool, offering strong signals of readiness for product and project-based environments.

Among respondents, 84.5% have 3-8 years of experience in IT, 88% work full-time, indicating a stable, committed segment of the talent market. Freelancing is growing gradually as professionals explore flexible work options with 8.8%.

Software Development leads at 49.2%, followed by Management, Testing and DevOps. Nearly half work in product environments (47.6% - next page), reflecting a shift toward end-to-end digital product building.

Although these findings reflect ITviec's respondent base, they reveals a clear pattern of a senior-leaning and software-driven workforce, strengthening Vietnam's ability to meet both domestic and global engineering demands

Group Of Expertise

Core tech stacks dominate: Java, Python, C#.

- **Programming Languages:** Java (17.4%) remains its position as the most widely used primary programming language., followed by C# (15.5%) and Python (12.8%).JavaScript (9.3%) and SQL (7.9%) round out the top five.
- **Plan to learn:** Python (32.7%) and Go(18.6%) are the top choices, reflecting their strong demand. TypeScript (11.4%) advanced to 3rd place, followed by JavaScript (11.2%) and Java (9.1%).

Top 10 Programming Languages

(primarily use)

Top 10 Programming Languages

(plan to learn)

- **Libraries & Frameworks:** .NET (27.0%) has continued to overtake React.js (16.6%) as the most widely used framework, while Node.js (17.4%) ranks 2nd. Angular dropped out of the top 10, and Apache Kafka climbed into 6th place (10.5%).
- **Management Tools:** Jira continues to dominate (59.6%), with Confluence growing to 30.6%. Notion (13.5%) and Trello (13.3%) are close competitors, while other tools remain below 12%.
- **Design Tools:** Figma further strengthened its leadership (60.3%), far ahead of Adobe XD (9.8%). Other tools such as Sketch (7.3%) and Framer(3.2%) remain niche players.

Top 10 Library & Framework

(currently use)

Top 10 Management tools

Top 10 Design tools

IT professionals demonstrate strong foundational skills, while learning priorities increasingly shift toward cloud, DevOps, and AI-related capabilities.

- **Core strengths remain in traditional foundation skills** IT professionals excel most in database management (34.4%), cloud and multi cloud (26.9%), and API development & integration (24.8%). Solid capabilities are also shown in project management (22.1%) and solution architecture (20.3%). These reflect strong grounding in infrastructure, backend, and system level expertise.
- **Learning priorities shift strongly toward cloud, DevOps, and AI related skills:** Top prioritized learning areas include cloud and multi cloud (29.1%), DevOps & CI/CD (23.7%), and project management (12.5%). New data also shows emerging interest in NLP and conversational AI (10.4%) and LLM fine tuning (9.4%), indicating a clear move toward applied AI and modern engineering.
- **Cloud, DevOps, and AI are emerging as key directions shaping the future development of Vietnam's IT workforce:** Cloud, DevOps, LLM related skills and security dominate learning direction, showing a transition toward modern infrastructure and applied AI. Traditional core skills such as database and API remain essential but no longer drive future growth. This reflects the re skilling and up skilling pressure IT professionals face in 2025.

Top Skills IT Professionals Are Excellent At

Top 10 Expertise IT Professionals Prioritize to Learn Next 12 months

IT Professionals excel in analytical and teamwork skills, while communication and leadership capabilities emerge as top development priorities.

- **Core strengths center on analytical and collaborative skills:** IT professionals excel in problem solving (50.5%), logical thinking (48.7%), and teamwork (43.6%). They also show solid confidence in project management (37.9%) and English speaking (31.1%). This highlights strong foundations in analytical thinking and cross functional collaboration.
- **Communication and English remain the biggest development gaps:** Top learning priorities reflect clear communication needs. English speaking ranks highest at 45.6%, followed by project management (27.6%) and English listening (24.6%). English reading and writing both appear in top strengths but remain in learning priorities, showing a consistent desire to improve global communication capabilities.
- **Leadership and influence skills emerge as the next step for career readiness:** Emerging priorities such as presentation (15.1%), leadership (14.5%), and negotiation (12.4%) indicate growing interest in influence, persuasion, and management readiness. This shows a shift from core teamwork skills toward professional presence and leadership capacity.

Top Soft Skills IT Professionals Are Excellent At

Top Soft Skills IT Professionals Prioritize to Learn Next 12 months

English proficiency remains limited among IT Professionals, with communication and presentation skills as the weakest areas across roles.

- In overall, IT professionals handle reading and writing technical documents reasonably well, but fall short on oral communication, collaboration, and training delivery, skills critical for global project work. English proficiency remains limited, with an overall average score of 2.7/5. Over half (57.8%) of IT professionals want to improve their English, highlighting strong demand for upskilling.
- Technical reading is the strongest (2.9), while communication in international teams (2.6) and presenting & training (2.5) are the weakest. Notably, 41.6% rate their presenting skills as Basic or lower, and 13.2% as Not Usable.
- Proficiency distribution skews low:** Across categories, only 2-4% reach Expert level, while the majority remain at Good or lower. For example, over 70% are at Good or below in communication and presentation.
- By role and function:** Higher English requirement in Management and Consulting, AI and Blockchain and IT services & IT consulting company

English Proficiency Levels of IT Professionals (self-evaluated, scale of 5)

IT career attractiveness shows a decline, while shifts in key challenges suggest a more balanced expectation–reality landscape while still signaling the need for clearer career pathways, stronger support systems, and improved well-being initiatives for IT professionals.

IT career attractiveness is declining, with good income dropping to 51.7%, flexible working arrangements to 42.0%, and exposure to new technologies to 39.0%.

On the challenges side, the fear of becoming outdated impacts 51.7%, strong market competition affects 42.0%, and mental stress has risen to 39%.

Top 5 Attractive Points Of IT Careers

	2024	2025
Have A Good Income	57.5%	51.7% ▼
Easy To Work Remotely	45.6%	42.0% ▼
Have Access To Many New Technologies	43.7%	39.0% ▼
Diverse Career Path	28.4%	28.9%
Easy To Switch To A Freelancer	18.3%	18.1%

Top 5 Challenges in IT Careers

	2024	2025
High risk of being outdated & substituted due to the fast-evolving nature of the tech industry	55.6%	51.7% ▼
High competition for IT job	47.2%	42.0% ▼
Mental pressure and stress	37.4%	39.0%
Physical health decline	30.6%	28.9%
Unexpected work requests	25.8%	18.1% ▼

High neutrality of 37.7% signals unmet needs and uncertainty despite 52.3% reporting satisfaction toward their current company.

The declining IT career attractiveness and rising workplace pressures highlighted by the current market trends translate into moderate overall workforce satisfaction, characterized by a significant segment that is neither happy nor unhappy.

- Despite the market challenges, a large portion of the IT workforce remains generally satisfied. More than 50% of IT professionals report being satisfied, with 14.3% being Very Satisfied. This suggests that core benefits still offer a strong foundation for job contentment.
- However, the high share of Neutral responses (37.7%) raises concern, as this group may represent IT professionals who feel unfulfilled or insufficiently supported. Their uncertainty positions them as a segment potentially vulnerable to disengagement if expectations continue to shift without corresponding improvements in workplace support or clarity.

Overall IT Professional Satisfaction Levels with Their Current Company

IT professionals value benefits, salary and work life balance, but career growth remains the weakest area.

- Surveyed IT professionals consistently priorities benefits, salary, work life balance, learning and training, and career development as their top drivers. However, satisfaction across these areas is not strong. Most employees fall into the neutral group, indicating unmet expectations.
- Career development shows the largest gap compared to other factors, where only 42.3% feel satisfied and 16.5% are dissatisfied. This reflects a structural weakness in growth opportunities, even though it is a top need for IT talent.

Top 5 Drivers of IT Career Satisfaction

Satisfaction Level Toward Core Drivers

IT Services and Western-origin companies deliver stronger talent experience compared to other company types.

Ratio Of Satisfied/ Very Satisfied By Company Type

Ratio Of Satisfied/ Very Satisfied By Company Origin

IT services & Western-origin companies lead the talent experience.

IT Services and Consulting achieve the strongest satisfaction levels across key drivers, including 66.4% for salary, 66.4% for benefits and 70.5% for work life balance. Western companies perform similarly well. Europe reaches 71.4% salary satisfaction and 73.0% benefits, while Australia and New Zealand achieve the highest overall satisfaction at 73.5% and strong work life balance at 75.0%. These results reflect more mature HR practices and better employee support systems.

Vietnam-origin & Non-IT companies show noticeable gaps.

Vietnam companies record the lowest satisfaction across most criteria, with only 43.7% overall satisfaction, 48.9% salary satisfaction and 40.7% for career opportunities. Non-IT businesses also underperform, with only 42.5% overall satisfaction and weak scores in salary (46.7%) and benefits (55.8%). These gaps highlight limited investment in people development and less competitive policies.

Regional work culture appears to play a significant role in shaping satisfaction levels.

Clear regional differences appear. Western companies deliver stronger work life balance, with Europe at 68.6% and Australia and New Zealand at 75.0%. Asian companies remain more traditional, reflected in lower work life balance scores such as 49.1% for Vietnam and 56.7% for Japan. Career opportunities also differ: Europe reaches 54.1%, while Vietnam remains at 40.7%. These patterns show how regional culture and policy transparency directly impact employee experience.

SALARY: Western and Consulting companies continue to offer higher salary levels, maintaining a clear pay gap with Vietnam-based employers.

- **Global vs. Local Compensation:** Salary levels differ notably by company type and origin. IT Services & Consulting firms report the highest average salary levels among surveyed company types, with Product companies following closely. Western companies lead salary ranges overall, while Vietnam-origin companies offer the lowest levels. Japanese and Korean companies fall in the middle with moderate salary differences.
- **Salary-Flexibility Working Correlation:** The IT Services & IT Consulting sector, which offers the highest average salary and the most flexible working model (around 42% hybrid/remote), is the attractive destination for IT talent looking for both high pay and work-life balance.

Average Salary By Company Type (VND)

Company Type	2024	2025
IT Services & IT Consulting	43,200,000	48,200,000
IT Product	47,400,000	43,900,000
Non-IT business	41,600,000	43,000,000
IT Outsourcing	38,400,000	39,700,000

Average Salary By Company Origin (VND)

Company Origin	2024	2025
Australia & New Zealand	60,700,000	59,900,000
USA & Canada	59,300,000	55,100,000
Europe	54,700,000	51,100,000
Asia (excluding Japan)	50,300,000	46,000,000
Japan	40,700,000	40,100,000
Vietnam	37,300,000	37,300,000

WORKING MODEL: A sign of return-to-office shift is reshaping IT working models, driven mainly by Vietnam and Asia while Western companies maintain higher flexibility.

- **The Push Back to Office:** The data indicates a clear shift toward more in-office work, with the share of fully in-person roles increasing by 5.9% in 2025, driven mainly by Vietnam- and Asia-origin companies. For those remaining hybrid, flexibility is diminishing when compare with the previous year. This trend creates a strategic tension, while IT professionals value flexibility for job satisfaction and well-being, company policies are moving in the opposite direction.
- **Market Tension:** Vietnam-origin and Outsourcing companies tend to offer lower salary levels and stricter on-site working models compared to other segments. This combination presents a substantial talent retention risk when competing against foreign firms that offer both higher pay and greater flexibility to IT talent.

Average Work From Home Days per Week

(IT Professional who works Hybrids)

Working Model By Company Type

Working Model By Company Origins

OVERTIME

Heavy OT is concentrated in a small but high-risk workforce segment.

47.1% of IT professionals report working overtime frequently or occasionally, a significant 16.4% fall into the heavy OT group with more than 8 hours per week. Another 35.7% work moderate OT (5–8 hours). This means a significant portion of the workforce experiences regular overtime, with a small but critical segment exposed to intensive OT. Roles such as Backend and Project Management are more exposed to sustained OT pressure.

The voluntary nature of overtime, reported by 48.0% of IT professionals, while a combined 51.9% report some form of encouraged or required overtime, suggesting extra hours are **culturally mandatory**. Notably, for 43.3% of respondents, this implicit requirement is not accompanied by any form of compensation or a clearly defined policy.

Overtime Frequency**47.1%** IT Professional are often working overtime**Overtime Intensive****16.4%** IT Professionals have intensive overtime with more than 8 hrs. per week**Forms Of Overtime Compensation****No compensation despite policy****30.1%**

IT Professionals claim the company has a paid OT policy, but employees did not apply or receive it.

No Overtime Policy**13.2%**

IT Professionals claim Company offers no OT pay & no compensatory leave

40.9% IT talent flight risk due to Overtime policy dissatisfaction.

The data reveals a critical area of concern regarding employee retention and satisfaction within the IT professional segment. Despite 63.7% of IT professionals reporting a full or mostly complete understanding of their company's overtime (OT) policy, 45.2% are nevertheless dissatisfied (Very Dissatisfied, Dissatisfied, or Neutral) with the current OT policy's implementation. This high dissatisfaction directly correlates with significant consideration of job changes, presenting a material risk to talent retention.

Consideration Of Job Change Due To Overtime Of IT Professionals**Satisfaction Level And Reason For Not Satisfied/Neutral with the Company OT Policy****45.2%**

IT professional are either not satisfied or neutral with the Overtime Policy of their company in which Very Dissatisfied (4.4%), Dissatisfied (7.2%) and Neutral (33.6%)

Reason #1

Mandatory Overtime
Culture

Overtime patterns vary sharply by company origin: Vietnam shows the most frequent OT, while Australia-New Zealand records the highest OT hours, followed by Europe.

Vietnam-origin companies have the highest OT frequency & the average compensation structure.

- IT professionals working in Vietnam-origin companies report the highest OT frequency (1.1 times/week) and high OT intensity (4.8 hrs./week).
- Compensation is around the average range with 42.8% paid, while 32.8% employees receive nothing and 12.3% not applied.
- This creates a structural overtime burden driven by short deadlines and constantly changing scope.

Japan companies manage OT best with low intensity and clear paid compensation.

- IT professionals working in Japan-origin companies report the lowest OT intensity (4.2 hrs/week) and moderate OT frequency (0.9 times/week), supported by clearer compensation frameworks
- 57.9% of Japanese-company employees say they receive paid compensation, Japan companies are the lowest in “no policy applied” (13.5%) and has clear frameworks that define eligibility.
- Workload is lower than average, supported by structured processes and predictable timelines.

USA-Canada and Australia-New Zealand show mixed practices & rely heavily on time-off-in-lieu.

- IT professionals working in USA & Canada – origin companies reports 0.9 frequency, 4.8 hrs./week intensity. while Aus-NZ: 0.7 frequency, 5.4 hrs./week intensity (the highest).
- Compensation pattern: high “time-off in lieu” in USA & Canada (26%) and Aus-NZ (35.3%). Paid compensation is moderate (39.6% USA, 35.3% ANZ).
- Reflects mature but flexible policies where OT is compensated informally rather than monetarily.

European companies OT less frequently but work longer hours when they do.

- IT professionals working in Europe-origin companies report lower OT frequency (0.6 times/week) but longer OT hours when OT occurs (5.2 hrs./week).
- Compensation is the weakest: Only 32.1% receive paid compensation, and 37.4% get nothing (highest compared to other origins).
- OT often comes from cross-time zone support and project peaks, where work is irregular but heavy.

Average Overtime (OT) Frequency and Intensity of IT Professionals

Company Origin	OT Frequency (times / week)	OT Intensive (Hrs. / week)
Vietnam	1.1	4.8
Japan	0.9	4.2
Asia (not including Japan)	0.6	4.6
Europe	0.6	5.2
USA & Canada	0.9	4.8
Australia & New Zealand	0.7	5.4

Average Overtime (OT) Compensation Benefits By Company Origin

Leave The Job

1. Sensitivity and Turnover Motivation in 2025: 31.8% short-term intention to leave in 2025, driven by Pay/Growth, Retention Hinges on Challenging Macroeconomy.

- Short- and mid-term turnover intention remains high and relatively stable at approximately 60.5%, up 1.4% compared to 2024, while the share of employees inclined to stay for more than 18 months continues to hold at around 40%. The reasons for leaving remain unchanged, primarily driven by compensation that does not meet expectations and limited career growth opportunities.
- Critically, many respondents indicate they are staying mainly for stability amid ongoing macroeconomic uncertainty (top 1 in reasons for intention to stay). In other words, the challenging job market—not improved satisfaction—is acting as the primary retention mechanism. Should external hiring conditions improve, this currently “stable” intention could quickly translate into higher actual turnover, as professionals regain confidence in exploring safer opportunities.

Intention To Leave Job

Reason For the Intention

Intend To Leave	Intend To Stay
Inadequate Compensation and Income	Seeking stability amid macroeconomic instability & a challenging job market
Lack of Growth and Advancement Opportunities	Satisfaction with Salary, Bonuses, and Benefits
Unsuitable Work Environment and Culture	Growth Opportunities and Job Fit

2. Job Search Conversion Funnel: Job search behavior remains stable, with IT professionals applying to more jobs, accessing more interviews, while job offers received remain unchanged.

Job search behavior and channel preferences remain nearly unchanged compared to 2024.

- Job search behavior remains consistent year to year.
- Candidates still check job opportunities about 1.7 times per week, matching the unchanged motivation to switch jobs seen in earlier data. Overall, both behavior and intention stay stable, reflecting a cautious but steady IT job market.

IT candidates apply to more jobs due to higher competition, although interview success improves and hiring demand remains unchanged.

- IT candidates now submit more applications (6.1 to 7.5) because competition is higher.
- Interview participation increases from 3.3 to 3.7, indicating improved access to interview opportunities.
- However, Job offers received remain unchanged at 2.7 from the IT professionals' perspective, suggesting that perceived hiring demand has not increased. As a result, the job search funnel becomes longer and more competitive, even though candidate capability remains solid.

Information Source For IT Professional To Find A New Opportunity

Job Search Conversion Funnel in 2024 vs 2025

Search For Opportunities

1. Salary expectations remain consistently high year over year.

- Salary expectations remain stable year over year, with **87.1% in 2024** and **86.9% in 2025** of IT professionals requiring a higher salary when switching jobs.
- In 2025, expected salary increases range from 33.8% among Junior/Fresher roles to 20.6% at the C-level. This shows that while salary growth is universally important, the intensity of demand varies across seniority.

**Salary Expectation In New Job Offer
In 2024 & 2025**

**Expected Salary Increment (%)
In New Job Offer**

2. Top criteria beyond Salary: Benefits, company stability, and work life balance now lead IT Professionals' reasons for applying to a new job.

- In the latest survey, IT professionals prioritize a broader and more practical set of criteria when searching for new job. Benefits rank highest at 51.0%, followed by company stability at 46.7% and work life balance at 42.9%, before they consider Job description aligns with expectation or how meaningful the work is.
- This shift reflects IT professionals' growing preference for security, healthy working conditions, and sustainability amid a market they perceive as highly unpredictable.

30.0%

Top 4 Attractive Benefits of IT Professionals

The current "Top 4 Attractive Benefits" is aligned with actual priorities. Salary stability and financial security remain the strongest drivers, followed by company stability and health protection. Work life flexibility and growth opportunities matter, but they do not outweigh financial related benefits in overall attractiveness.

#1 Financial Value

Competitive salary, substantial bonuses, frequent salary reviews

#2 Work Life Autonomy

Remote/hybrid work, flexible hours, generous annual leave, paid personal days.

#3 Health & Well being

Full social insurance, premium health coverage, benefits extended to family.

#4 Career Growth Support

Training budget, certifications, business travel opportunities, clear development roadmap.

Interview & Consideration

Interview

The topics IT professionals pay attention to during interviews reveal what truly shapes their decision making. Company culture and everyday environment stand out most (57.2%), followed by real working hours (22.9%) and the company's approach to employee engagement (16.4%). These signals help candidates form an authentic picture of what it is like to work there.

Evaluate among receiving job offers

Full-time Stability Leads.

Full-time employment remains the top comparison factor when candidates evaluate multiple job offers, highlighting the continued importance of job security.

Hybrid Work Becomes a Standard Expectation.

Hybrid is no longer a competitive advantage but a default expectation in offer decisions. Employers cannot rely on flexibility alone to differentiate their offers and must present additional value.

JD–Role Alignment Declines the Most.

This is the sharpest drop among all factors, showing candidates are more willing to compromise on perfect role fit in a cautious job market. Many prioritize stability or overall package over a fully aligned job description.

Top 5 Criteria To Evaluate A New Job Offer In 2024 vs 2025

Company Engagement

Income stability, company standing, and leadership quality continue to define long-term fit for IT professionals.

Salary and financial security remain the strongest drivers of long-term engagement.

Across both 2024 and 2025, salary related factors consistently dominate. Competitive salary stays high at 53.6%, while key financial benefits such as annual salary increases (45.5%) and 100% salary insurance (43.2%) remain essential. In 2025, financial stability continues to shape expectations through priorities like 100% salary insurance (33.8%) and have annual salary reviews (32.0%).

Location remains the number one priority for long term fit.

“Not far from home” continues to be the top location related factor in both years, chosen by 47.5% in 2024 and still leading with 40.9% in 2025. Although the percentage decreases, its position as a top priority does not change.

Leadership rise in importance in 2025.

Leadership-related factors gain stronger prominence in 2025, with clearer emphasis on technical competence and team protection, leaders with solid technical expertise (28.5%) and leaders who listen and protect the team (27.9%).

In a more cautious market environment, IT professionals increasingly emphasize the financial strength of companies, reflected in the proportions of 43.2% in 2024 and 32.2% in 2025.

PART 07

IT FREELANCERS

Vietnam's IT freelancers in the survey are highly educated and bring strong professional experience into the freelance market.

Most IT freelancers are well-qualified, with over 85 % holding a Bachelor's or Master's degree and nearly 80 % having more than five years of industry experience. With 65.1 % working full-time while having side jobs, freelancing has become a primary career path for many professionals, ensuring reliability and strong client commitment.

of Freelancer graduated with Bachelor degree, 6.6% with Master and 8.2% having College degree

Years of Experience of IT Freelancer in the IT Industry

Base: All IT Freelancers

Experienced software developers continue to drive demand for specialized IT freelance projects in Vietnam.

Over half of IT freelancers previously held full-time software development roles, showing a clear trend of experienced professionals embracing project-based flexibility. Web and mobile app development remain the most common freelance projects, while rising demand in project consulting, QA, and data analytics reflects a shift toward higher-value, specialized work beyond coding.

Top 5 Areas of Expertise Before Becoming Full-Time IT Freelancers

Base: All IT Freelancers

Top 5 Most Common Project Categories for IT Freelancers

Base: All IT Freelancers

The composition of IT freelance project sources indicates a continued shift from the U.S. market toward Vietnam.

- In 2025, the center of IT freelance projects shifts from the US to Vietnam, with domestic projects accounting for 67% compared to a noticeable drop in US-origin projects. This change indicates a growing local client base and a more self-sustaining IT freelance ecosystem.
- Despite this shift, IT freelancers maintain the same level of earnings compared to 2024-2025 period: Averaging 30.7 million VND/month and 34 USD/hour, with mobile app development placing the highest-paid field for monthly gross income, while project consulting paying the highest hourly rate.

Top 5 IT Freelancing Project Categories By Average Gross Monthly Income And Hourly Rate

(Data based on average reported income in the past 6 months)

Base: All IT Freelancers

Surveyed Vietnam's IT freelancers mainly value flexibility and rely heavily on personal networks for opportunities. Financial security and stronger professional practices remain top priorities for sustainable income growth.

- From the survey, Full-time IT freelancing is highly motivated by the desire for flexible working hours (69.2%) and the ability to work remotely (50.2%), promising increased income potential. However, pursuing this path requires a shift beyond technical expertise. Success demands strong competencies in ownership, client management, and financial skills to address the top challenges: ensuring a stable income (34.0%) and mitigating risks such as late payment or non-payment by clients (22.0%).
- The most secure path forward for IT freelancers is a dual-responsibility model - maintaining a full-time role while taking on side projects. This approach is already embraced by 45.3% of surveyed IT freelancers, who plan to continue freelancing alongside their full-time jobs. This strategy not only accelerates skill growth but also strengthens the most crucial source for freelancing IT projects: 46.2% from acquaintances, friends, and relatives. The data reinforces a clear message that relationship building is essential for long-term career readiness in the freelance IT market.

Strong academic focus is evident, but their readiness in practical skills remains limited, resulting in skill gaps and increasing job search anxiety among IT students.

Strong academic focus but limited practical preparation.

IT students invest heavily in academics, with 54.1 % aiming for the highest GPA and 50.3 % taking extra courses. However, real world preparation is low, as only 28.6 % gain freelance experience, 26.4 % join projects or hackathons, and 18.3 % participate in soft skill clubs. This reveals a clear gap between academic effort and practical readiness.

English improvement is a priority, but skills remain basic.

Improving English is the most common preparation activity, reported by 59.1% of IT students, yet self-evaluated proficiency remains at a basic level on average (1.68/5). This shows students recognize English as a major barrier when entering the job market, especially for technical communication and teamwork.

Job-readiness anxiety driven by skill gaps and market pressure (see data in next page).

Students express strong concerns about their readiness due to technical gaps, weak soft skills, and rising hiring expectations. Many feel their practical ability and confidence are not enough to meet employer demands, even for entry level roles.

Top 5 Important Factors From IT Employer To Evaluate IT Candidate

Problem-solving ability in real-world technical challenges **44.6%**

Adaptive mindset & willingness to learn new technologies **43.4%**
(AI, digital tools)

Ownership and accountability **39.8%**
(takes initiative, responsible for outcomes)

Hands-on technical proficiency **37.3%**
(e.g., coding, debugging, system design relevant to the role)

Ability to learn quickly and adapt to new technologies/environments **36.1%**

Activity of IT Student For Preparing For Better Job Search/Career After Graduation

No	Study Activities	%
1	Improve English skills.	59.1%
2	Try to achieve the highest GPA possible.	54.1%
3	Take courses to enhance the major knowledge and skills.	50.3%
4	Participate in internships or trainee positions in an IT department or company.	42.8%
5	Gain experience through freelance work or projects.	28.3%
6	Try to achieve the scholarship	26.4%
7	Enroll in contests or hackathons related to the IT major and future IT job.	26.4%
8	Learn another foreign language (besides English).	23.3%
9	Participate in soft skill clubs or courses.	18.2%
10	No, I haven't done any activity for preparing myself for better job search after graduate.	3.8%

Most IT students report strong interest in their study programs, although many expect more practical learning and clearer job placement opportunities.

IT Student Interest in University Study Programs

Reasons Students Are Not Interested

Limited job placement or internship opportunities in well-known IT companies	47,5%
Lack of real-world hands-on experience in courses (too much theory)	42,4%
Shortage of specialized faculty in emerging fields (AI, cybersecurity, blockchain, etc.)	30,5%

Reasons Students Are Interested

Strong faculty with industry experience and research expertise	42,3%
Good industry connections, including guest lectures and tech partnerships	42,3%
Strong job placement and internship support from top companies	36,1%

Main Concerns About Job Search Or Career Orientation Of IT Student

Technical Gaps Lack of Practical Experience: Difficulty applying theory; insufficient real-world project exposure. Unstable Fundamentals: Gaps in core knowledge, hindering complex problem-solving. Poor Specialization Focus: Undecided on a specific career path (e.g., Data, Web Dev), leading to unfocused study.	Soft Skills Deficits Weak Teamwork: Poor collaboration, communication, and conflict resolution skills. Low Self-Learning & Adaptability: Struggles to independently learn new tech and keep up with industry changes. Inadequate Presentation Skills: Difficulty articulating ideas and performing well in interviews.	Job Market Barriers High Experience Requirements: Companies demand experience (1-2 years), blocking fresh graduates. Fierce Competition: Oversupply of graduates leads to intense rivalry for entry-level roles. Lack of Career Direction: Confusion about the right starting path or company size.
--	--	---

English Competency: A significant gap remains between university-level English training and the practical communication skills required for IT careers.

Passive learning dominates even though most students are in their final year.

Most students in the survey are in their final year, yet their English learning habits are still dominated by passive methods such as reading or watching movies. These approaches improve exposure but do not build the active communication skills required for real IT work. Students should be having more structured and practical trainings for IT-related English usage.

Key English skills are considered averagely basic despite students being close to graduation.

Final year students still rate themselves mostly at Basic level in writing, speaking, listening, and presentation skills. Writing and public speaking are the weakest areas.

The gap between university English requirements and job market expectations becomes urgent for graduating students.

Even with English requirements in place at universities, students still rate their real-world English capabilities as low. The gap is most visible in practical skills needed for IT work such as writing reports, presenting ideas, and communicating in teams. This reinforces the need for both institutions and students to invest more intentionally in English competency for global careers.

Most internship opportunities come from local, IT-focused companies.

Most internship opportunities for IT students come from local and IT focused organizations. A large majority of internship companies are based in Vietnam (90.9 %), reflecting a strong domestic talent pipeline but limited exposure to international work environments.

Students mainly intern in IT driven sectors such as IT services and consulting (17.7 %), software product and web services (16.1 %), and software development outsourcing (9.7 %). Most common intern positions lie in the field of core software development such as Software Engineering Intern, Back-end or Front-end Developer Intern.
